

From a Dike House to Dike Architecture

The Netherlands & its Future

1. Amsterdam
2. Rotterdam
3. Maeslant barrier
4. Eastern Scheldt barrier
5. Haringvliet barrier
6. Afsluitdijk
7. Gouda inlet
8. Bernisse inlet
9. Spijkernisse inlet

Within dike rings

- Below NAP
- Above NAP

Areas outside dike rings

- Areas outside dike rings
- Areas threatened by flooding along the river Meuse

Consequences of sea-level rise

	2 m and more	5 m and more
Pressure on the dikes		
Littoral zone more dynamic		
Marsh, groundwater seepage, salinization		

Will this be the future of
the Netherlands?

Or

And even we live behind the dikes, will we still feel safe on such a low landscape?

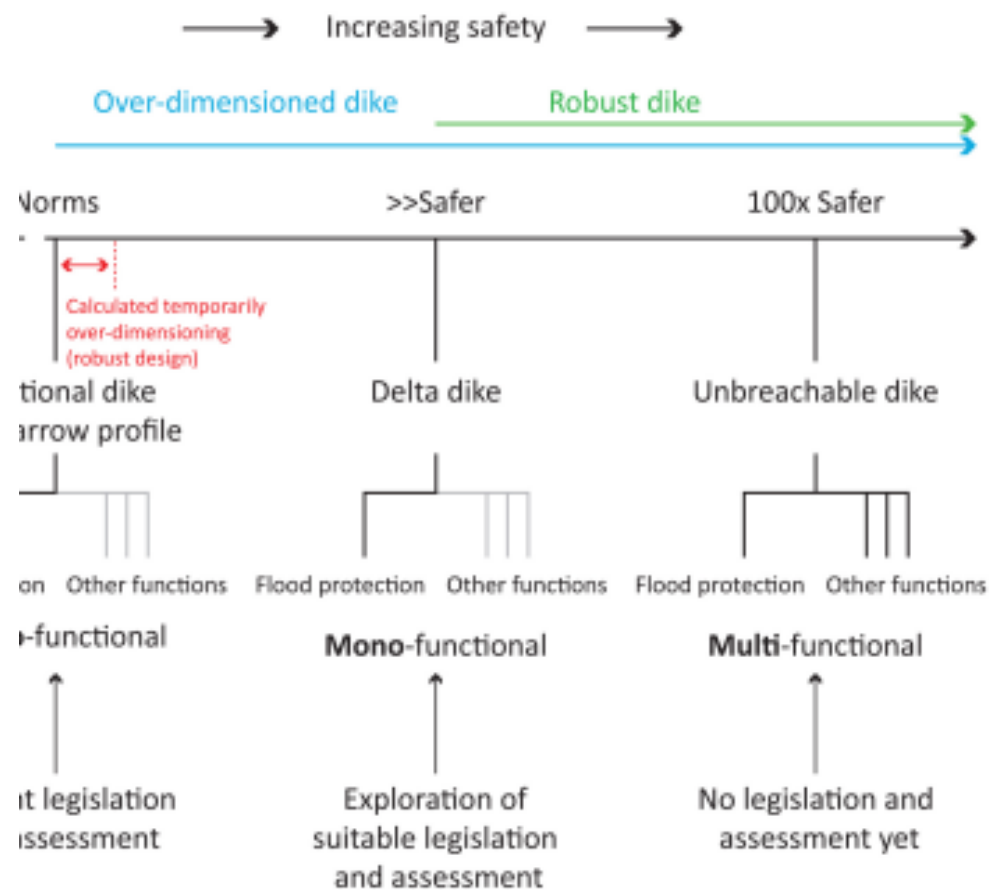

Will we build higher dikes? And can they still protect us?

Why not living on the edge between water and land?

IS THAT EVEN POSSIBLE???

Visualization of the relation between the various dike concepts in the Netherlands; these concepts are described in Table 1.

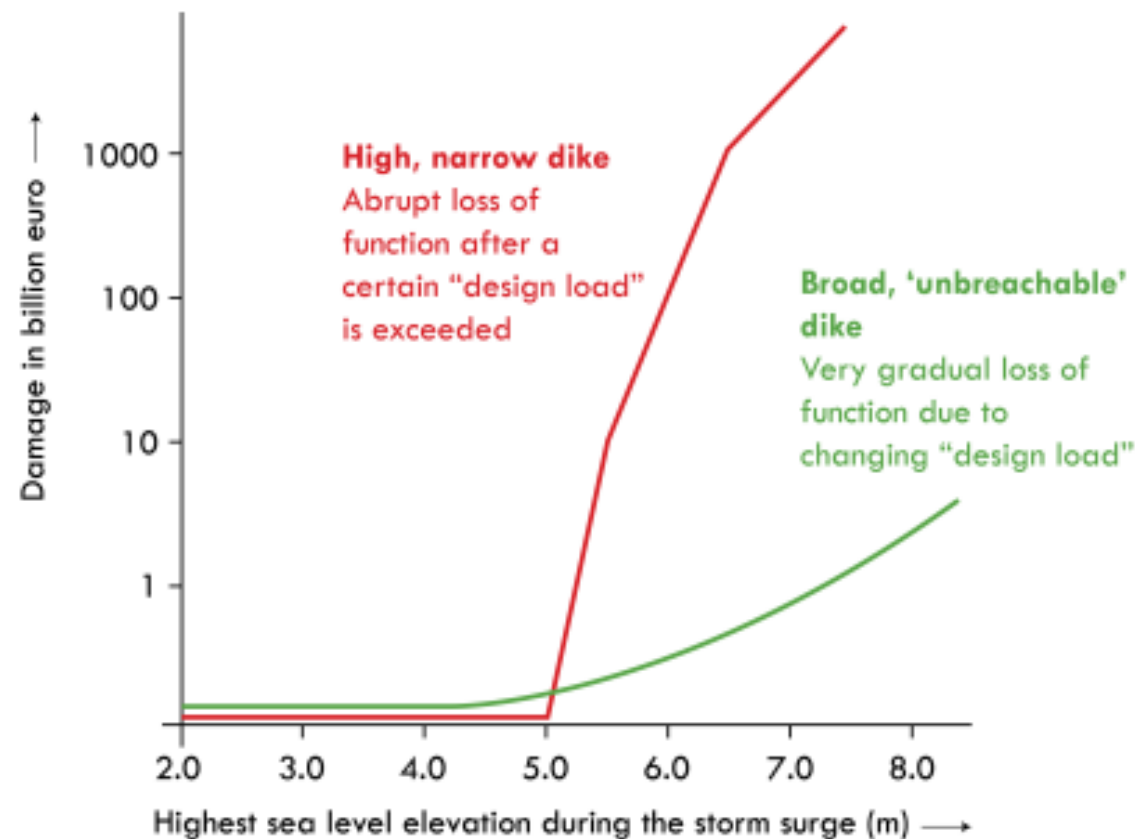

Fig. 2. Damage functions of narrow and broad dikes (Vellinga, 2008).

Research Question

In the context of an elevated sea dike, what foundation types and structural systems demonstrate the highest suitability for buildings on the dike?

x ... n = more load

32 . Detail modular pile, on illustrations

Principles

Steel foundation below dike body

Waterproof structure on the ground floor

Building on the horizontal platform

Off-grid climate system

Location

SeaDike

Location

Which architectural language suits buildings on the
dike?

Research by design

What are the architectural principles?

UNITY

SCALE

CONTEXT

RESILIENCE

What is the concept on a big scale?

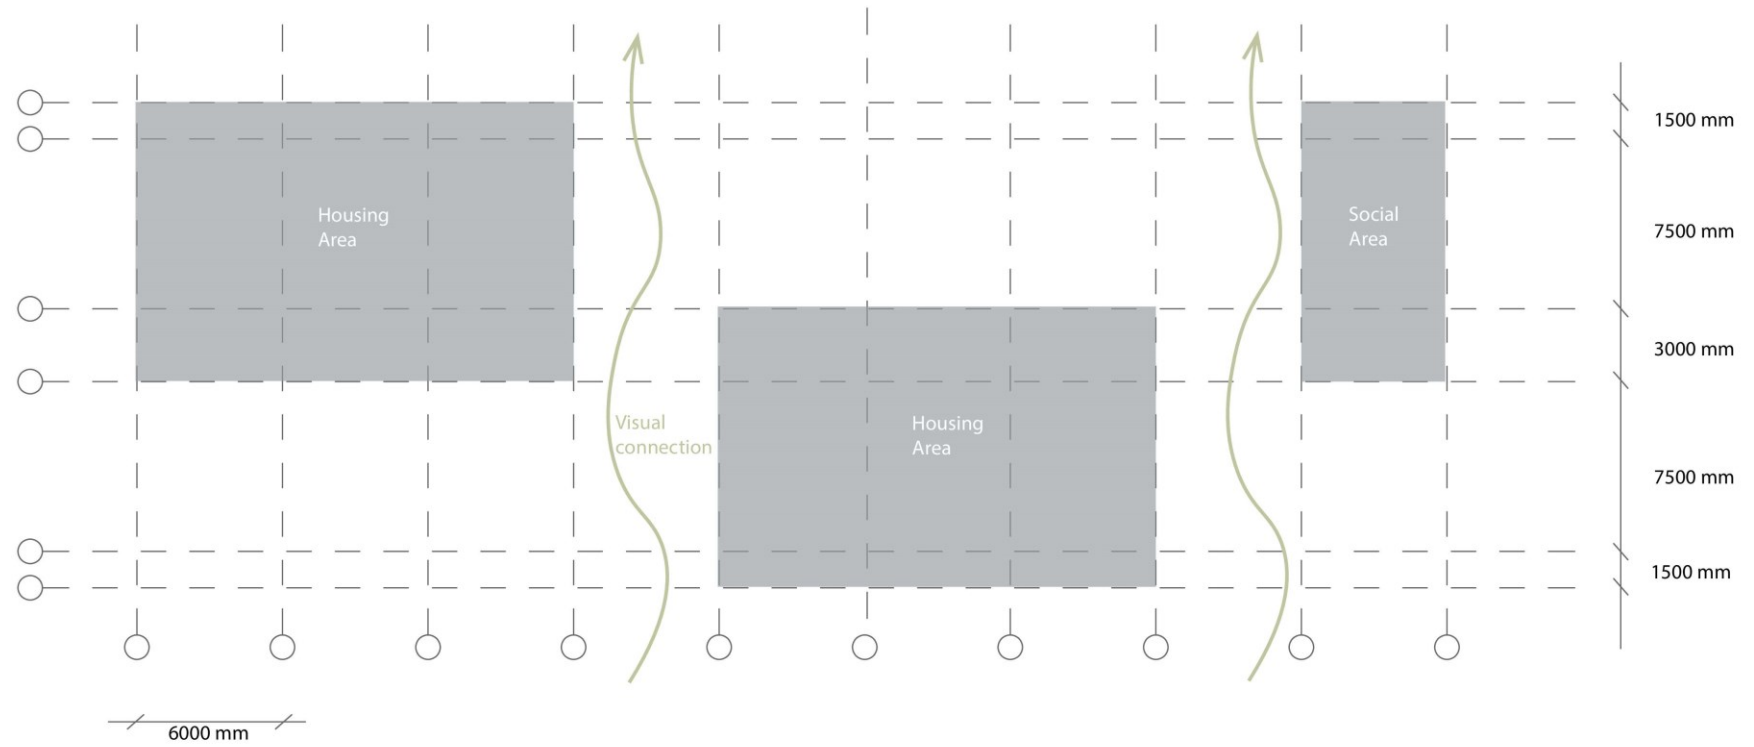

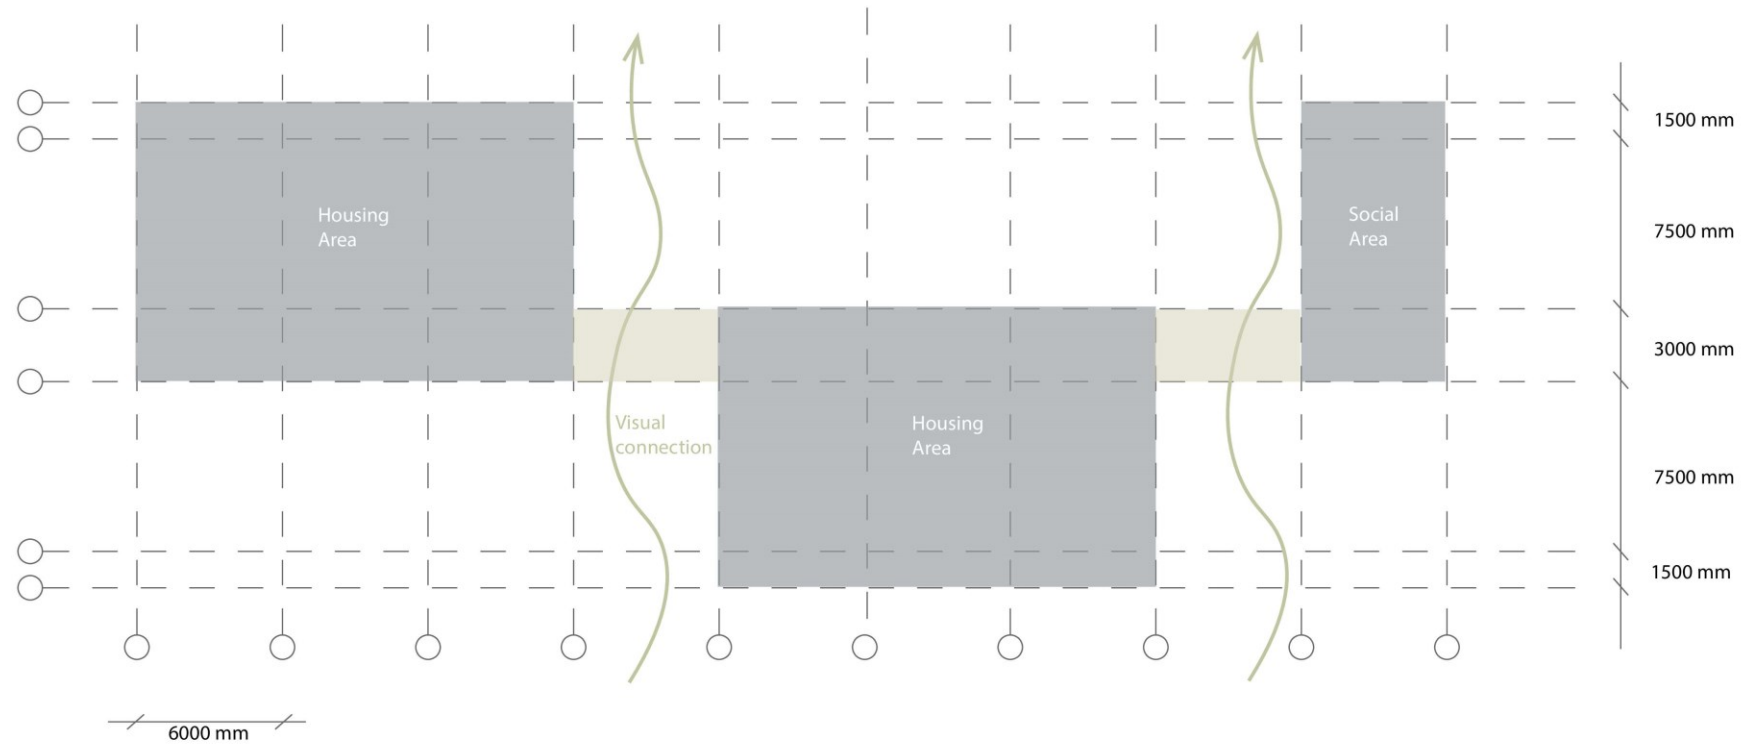

Grid that can grow

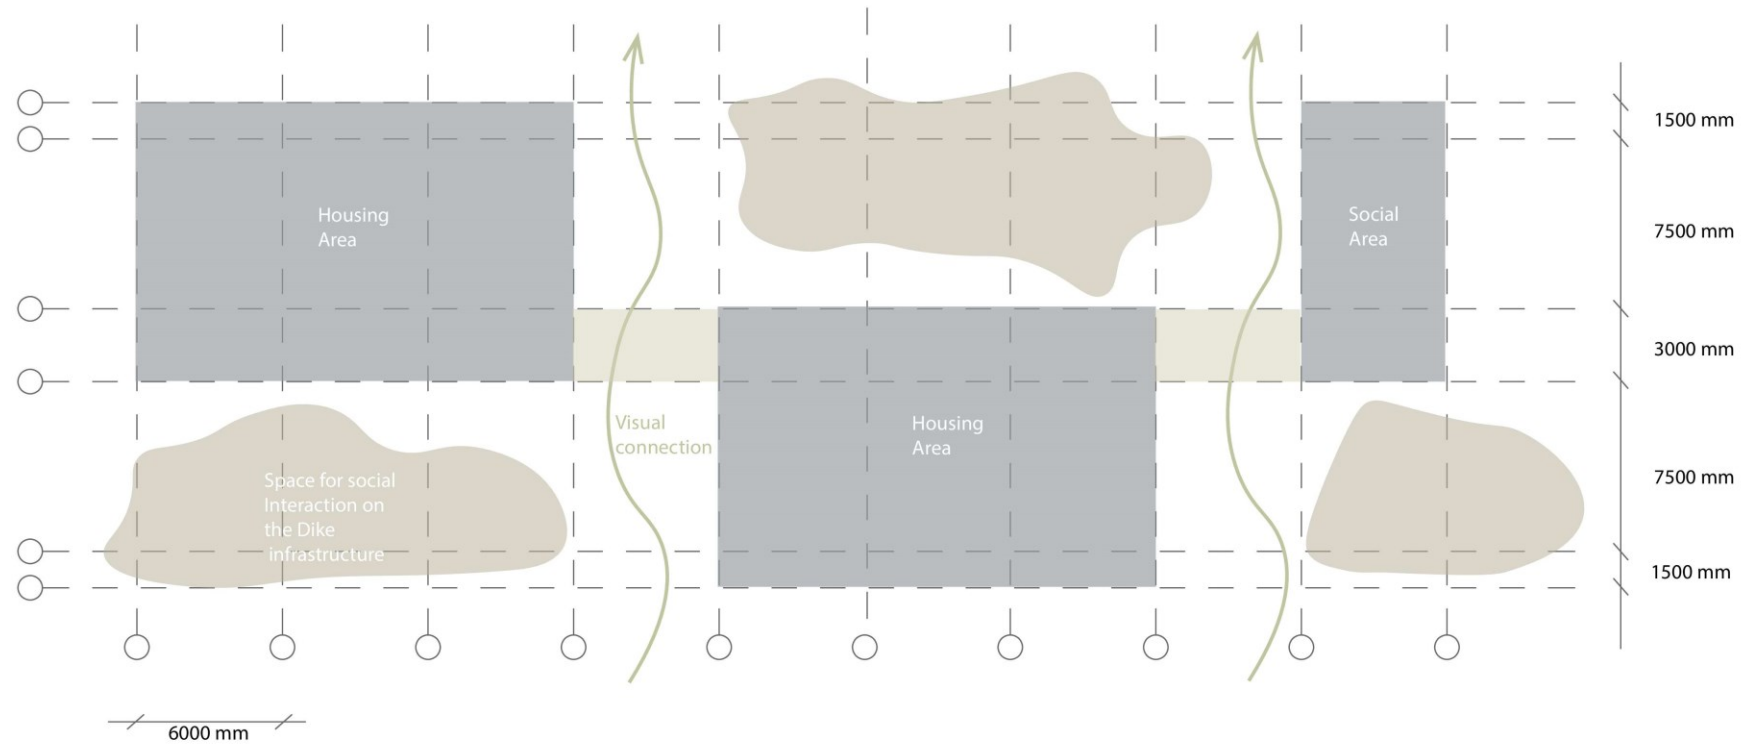

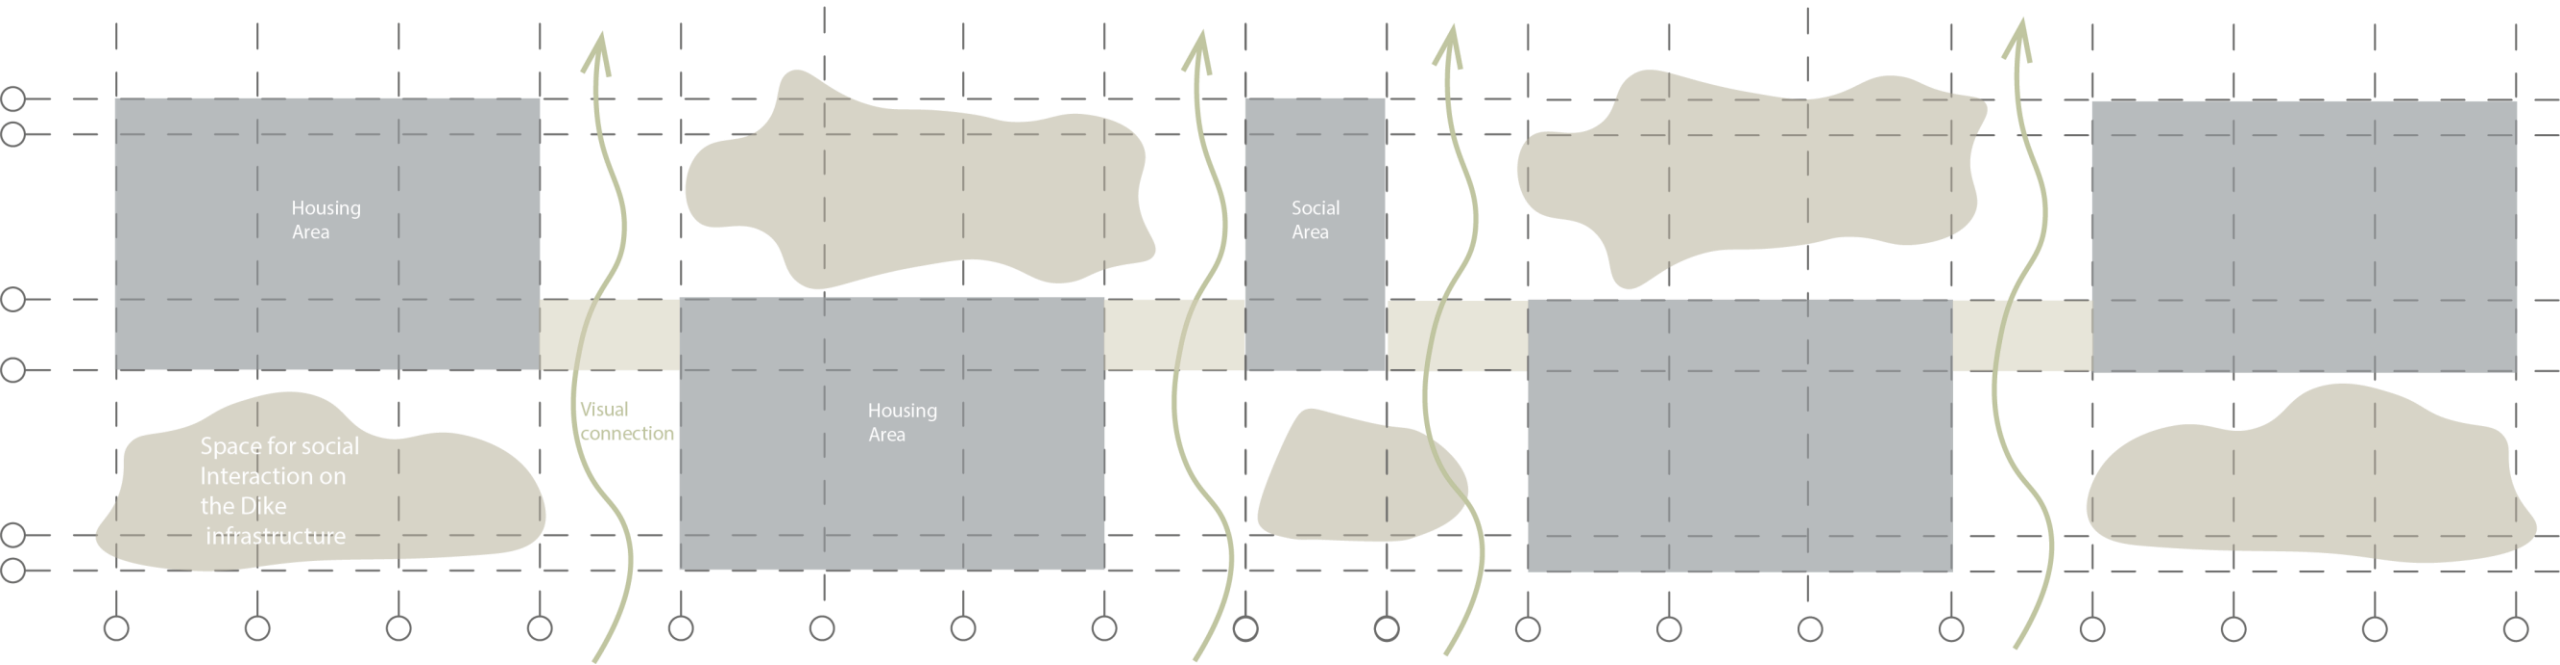

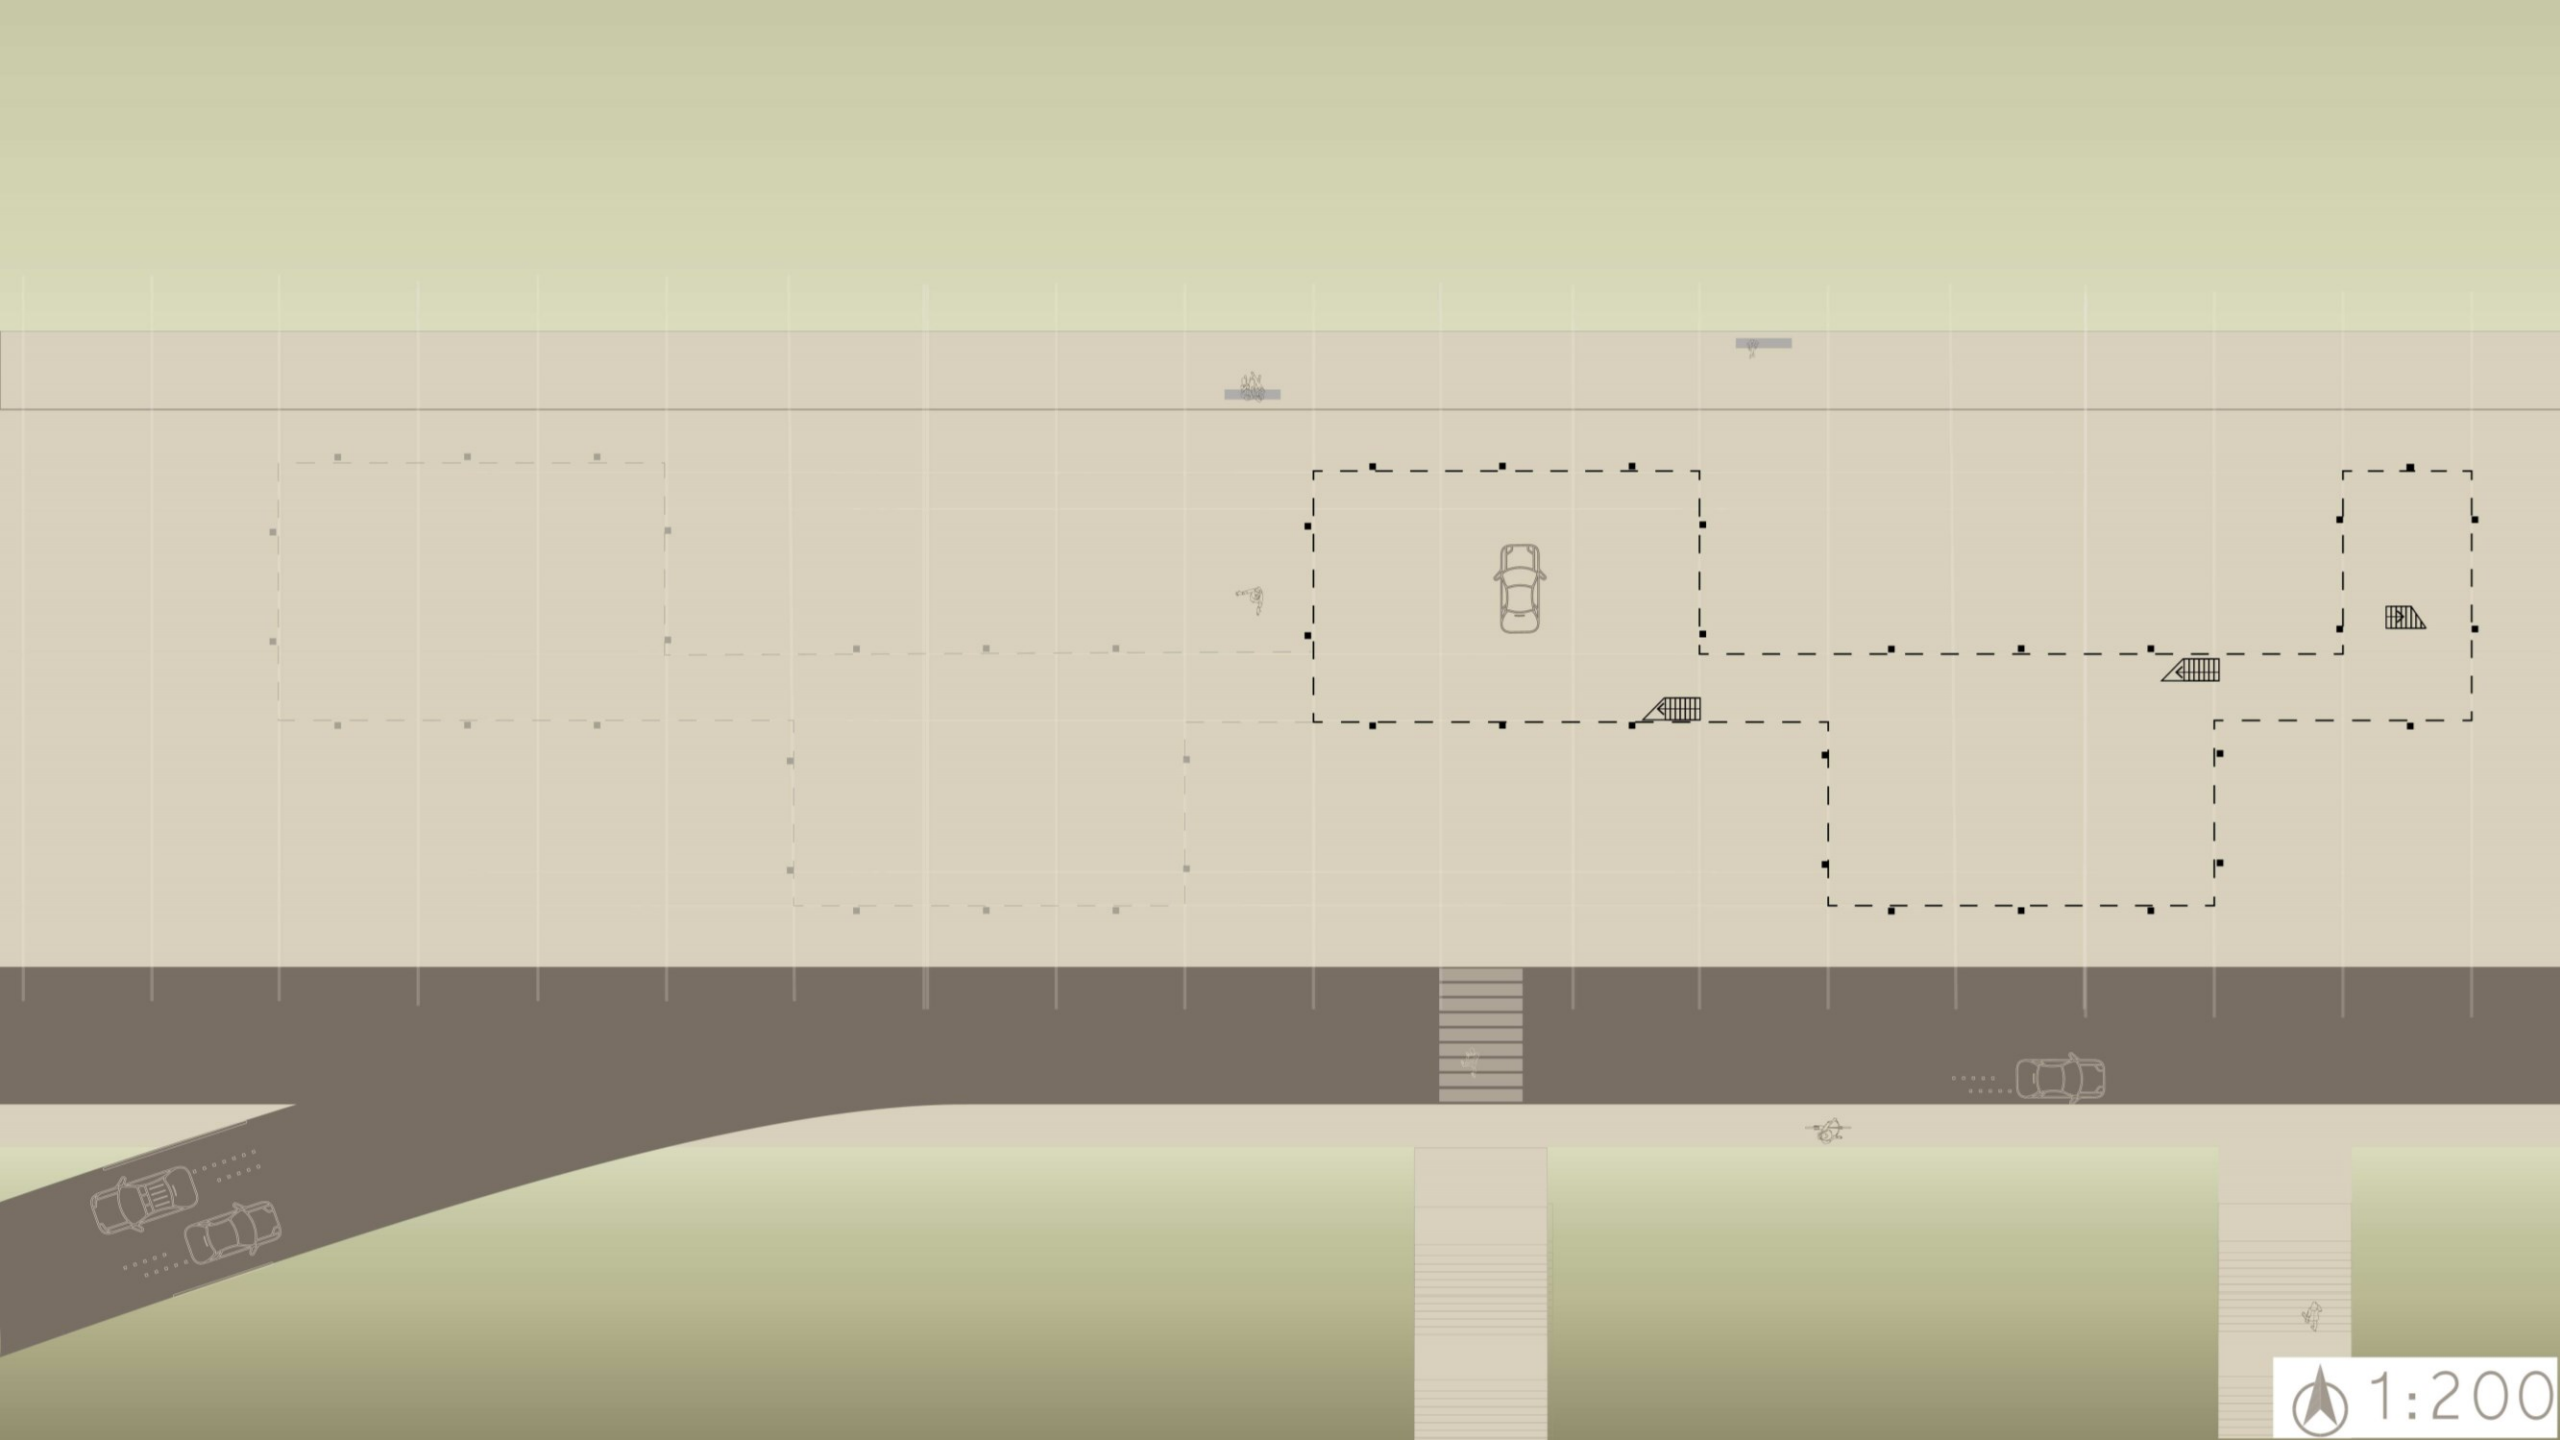

Design

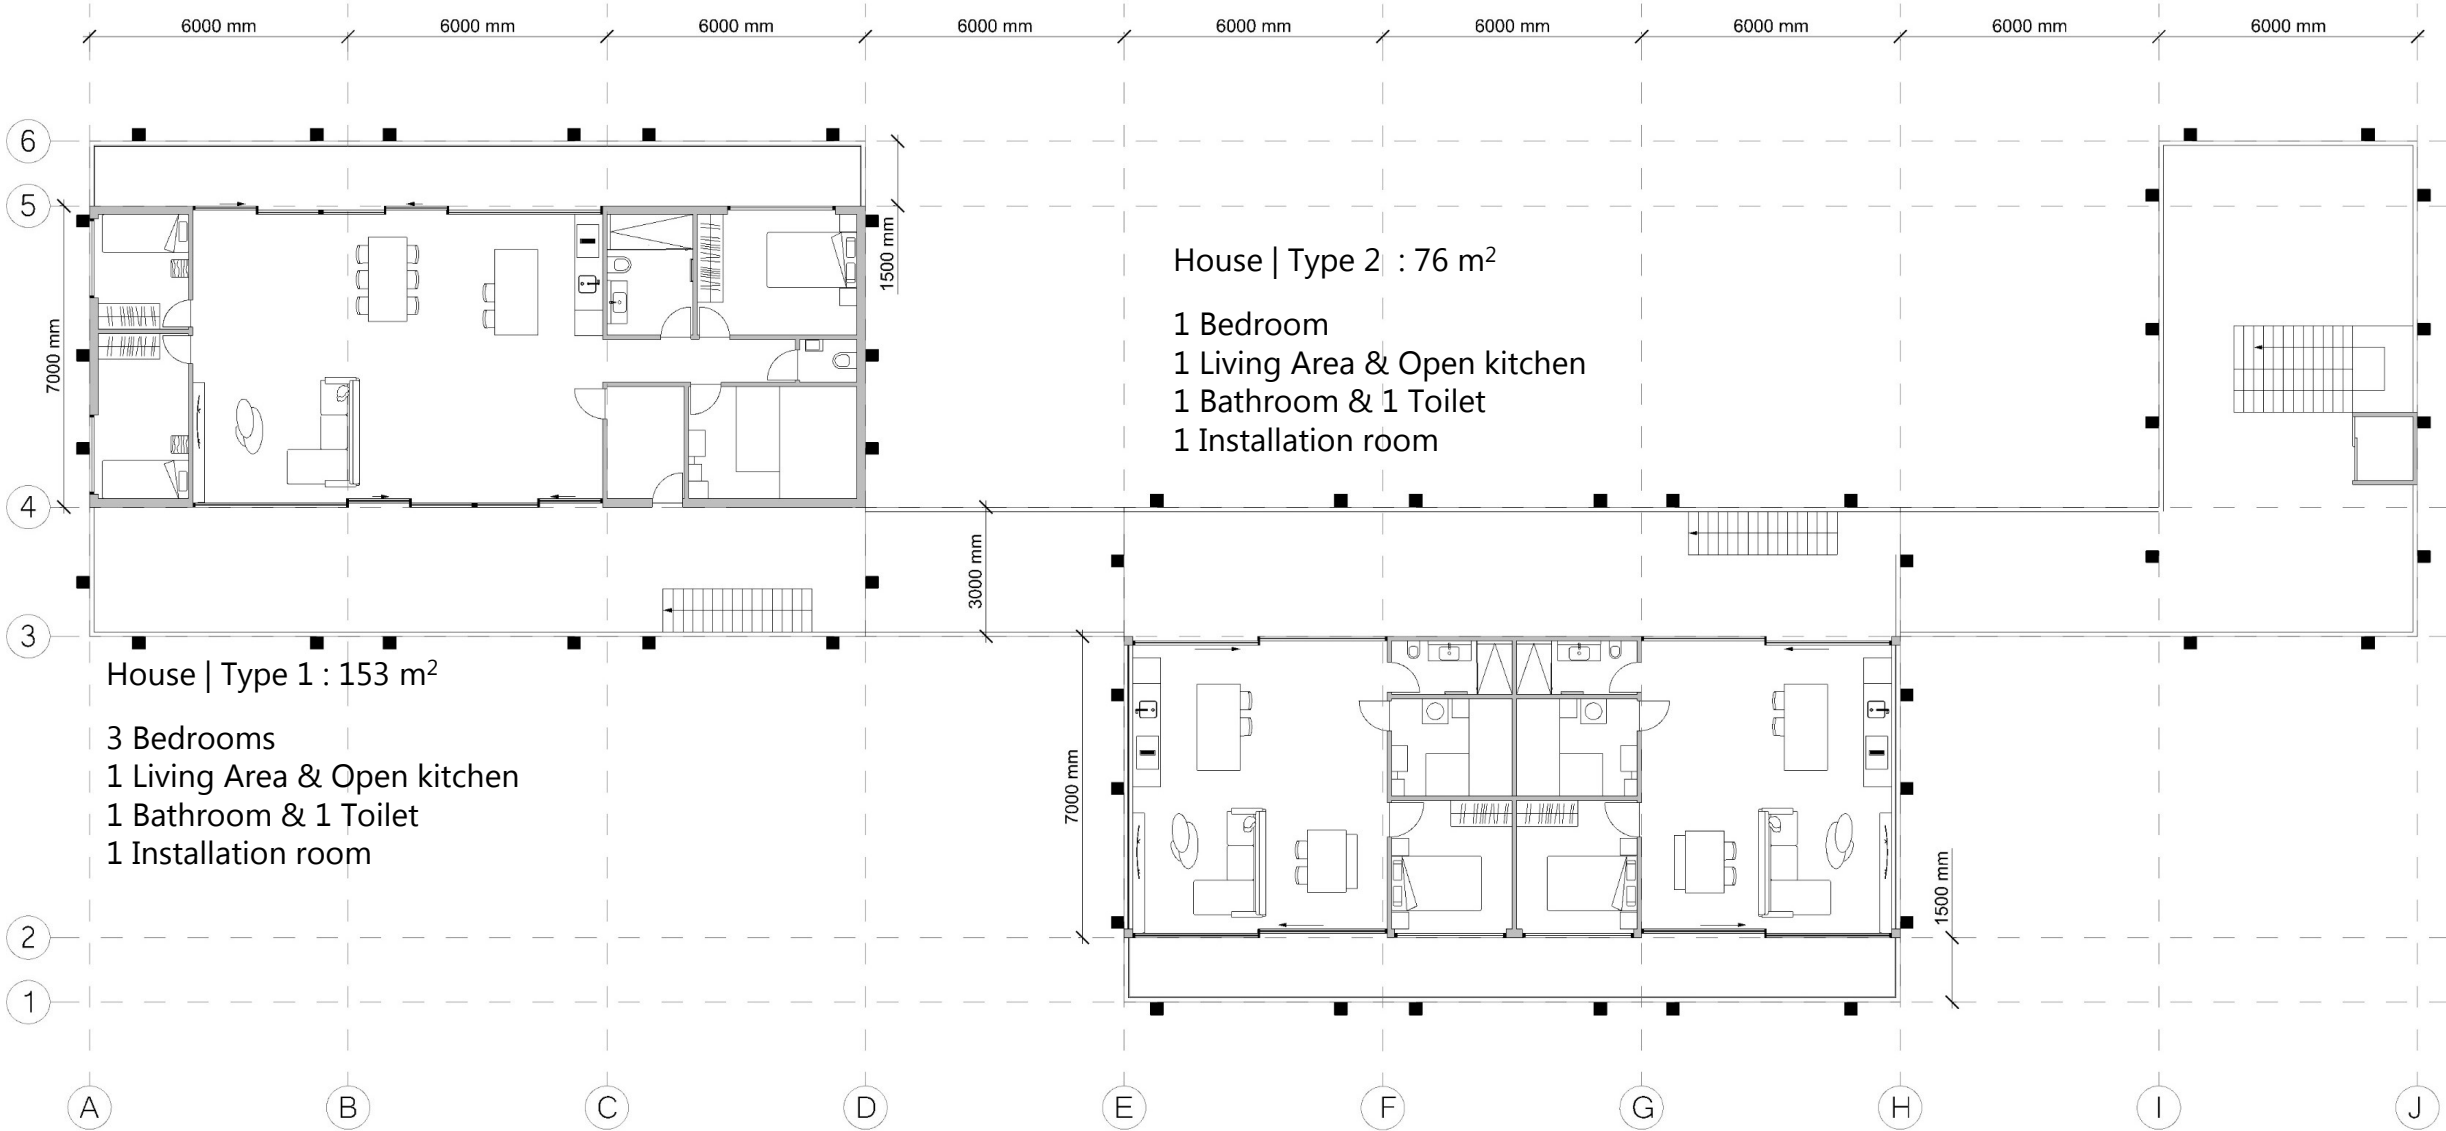

Dike
Horizontal
Platform

Building
Area

1:500

House | Type 1 : 153 m²
 3 Bedrooms
 1 Living Area & Open kitchen
 1 Bathroom & 1 Toilet
 1 Installation room

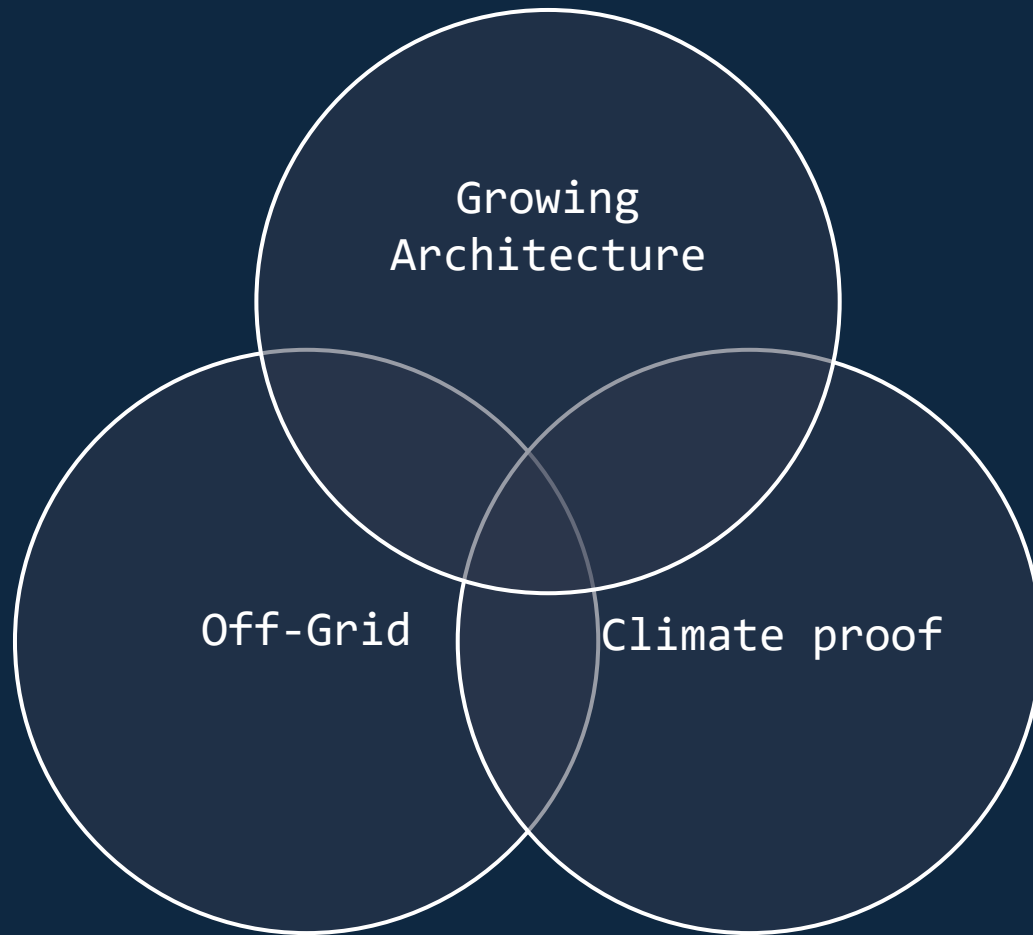

House | Type 2 : 76 m²
 1 Bedroom
 1 Living Area & Open kitchen
 1 Bathroom & 1 Toilet
 1 Installation room

1: 20 | Facade fragment

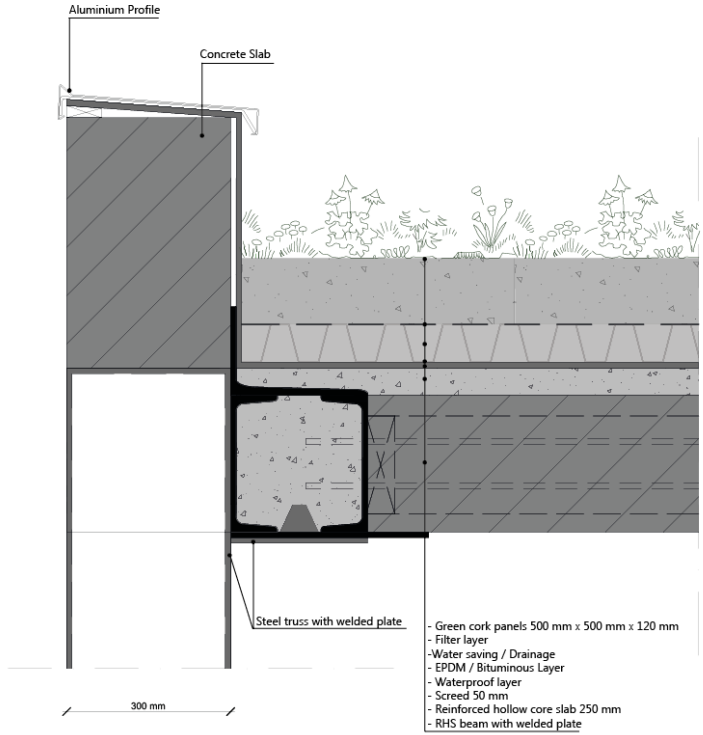

3 main qualities of the design

Carrying a green roof today &
Carrying more houses tomorrow

61 Houses per 1 Km

46.125 Houses per 750 Km (Sea dike of Groningen)

122 Houses per 1 Km with two floors buildings
91.500 Houses per 750 Km (Sea dike of Groningen)

And in case of three floors buildings :
183 Houses per 1 Km
137.250 Houses per 750 km

122 Houses per 1 Km with two floors buildings
91.500 Houses per 750 Km (Sea dike of Groningen)

And in case of three floors buildings :
183 Houses per 1 Km
137.250 Houses per 750 km

Architecture in the Landscape

Reflection

A woman with her hair in a ponytail, wearing a white blouse and green pants, stands on a wooden deck looking out a large window at a cityscape. The scene is overlaid with a semi-transparent white filter. The text "Thank You" is centered in the middle of the image.

Thank You
