# THE PROBLEM

**CHALLENGES IN  
THE REAL ESTATE  
MANAGEMENT**

**COMPLEXITY**

**THE RESEARCH  
QUESTION**

# CHALLENGES IN THE REAL ESTATE MANAGEMENT

Corporate Real Estate alignment

Location decision-making process

Changing needs of various stakeholders,  
strategies and unforeseen alterations

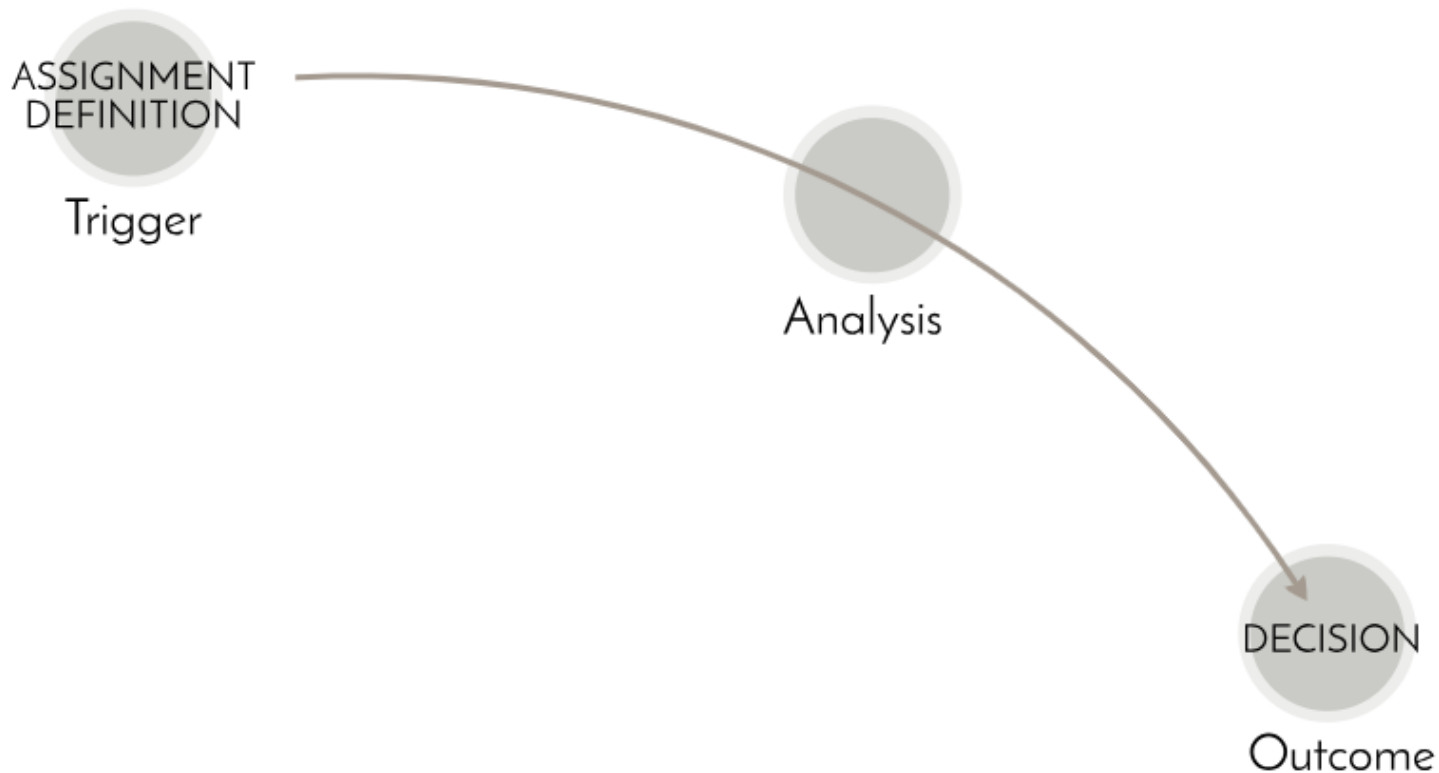

Many models, inaccessible for CRE managers  
Scarcity in expert tools

# LOCATION DECISION MAKING PROBLEM

# LOCATION DECISION MAKING COMPLEXITY

# ASSIGNMENT DEFINITION

Market, internal and external factors

Characteristics of company

Stakeholder engagement

Driving forces and strategies

## LOCATION CRITERIA

# LOCATION DECISION MAKING PROBLEM

*The awareness of criteria range and their relative importance is lacking in the majority of cases. High level of expertise and vast amount of knowledge is required, however, the proper supportive expert tools are in scarcity. The knowledge is available but disperse.*

# **THE RESEARCH QUESTION**

**How can an expert tool improve  
(re)location decision making in large  
multinational companies?**

Operational research:  
Creating an artifact

# THE EXPERT TOOL

Expert systems (ES) represent and reason with knowledge of some specialist subject

Aim at solving problems or giving advice

Can be critical for decision support

The ES tool is a software containing the basic components of an ES

Mainly stand-alone, independent systems

Can provide a support to DSS models

# LOCATION CRITERIA

**COMPANY  
FEATURES**

**(RE)LOCATION  
PROCESS  
CHARACTERISTICS**

**REASON  
BEHIND LOCATION  
SEEKING**

**OBJECTIVES  
TO BE ACHIEVED**

**CRITERIA**  
• 110 criteria  
• 160 sub-criteria  
**14 CATEGORIES**

FEATURES**

**(RE)LOCATION  
PROCESS  
CHARACTERISTICS**

**REASON  
BEHIND LOCATION  
SEEKING**

**OBJECTIVES  
TO BE ACHIEVED**

**PATTERNS**

**CRITERIA**

- 110 criteria
- 160 sub-criteria

**14 CATEGORIES**

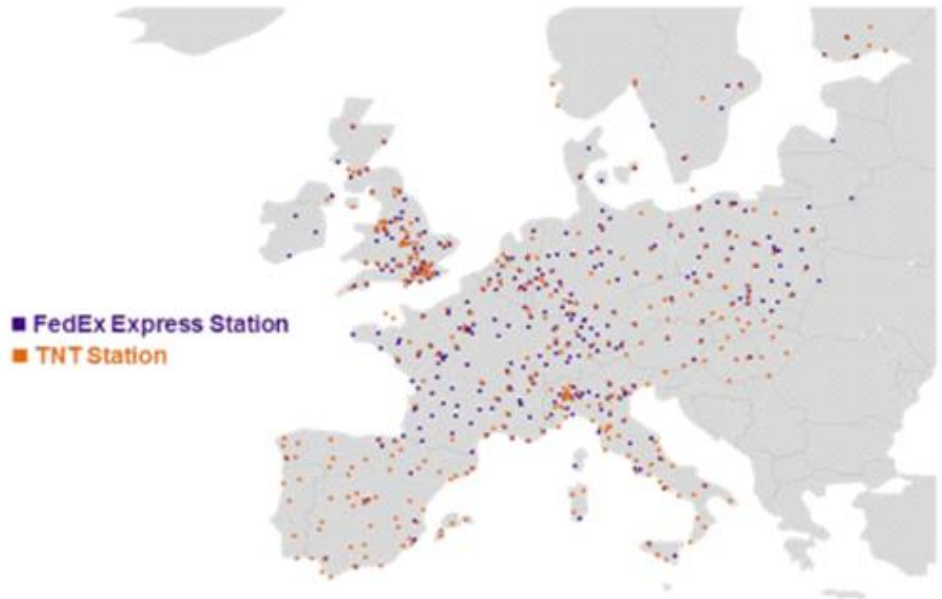

# THE CASE

Optimising the real estate portfolio to support core business:

- Lower the real estate footprint
- Lower costs
- Limit the number of occupied buildings

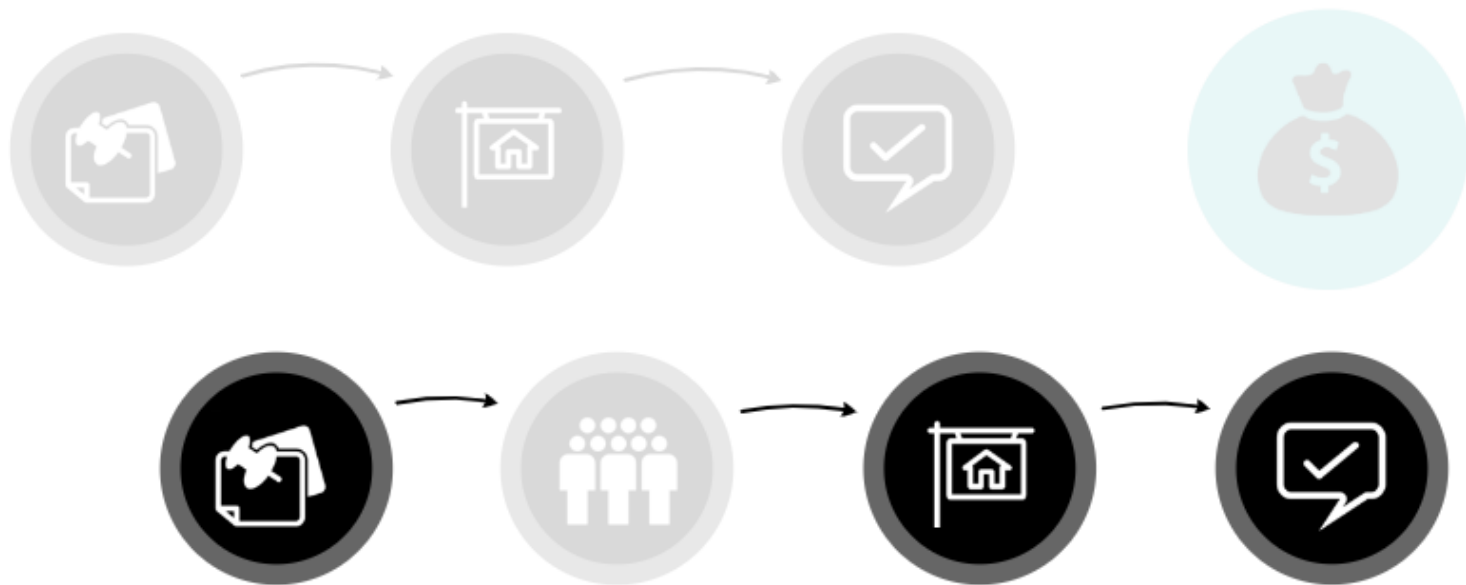

# THE CASE

# THE CASE

# THE CASE

# TOOL DEVELOPMENT

## 3 ROUNDS:

- 5 users:  
pilot case
- 1 user:  
outside the case
  
- providing and  
adjusting input
- evaluating output
- evaluating tool

TESTING

## 4 STEPS:

- Logical testing
  - Prototype
- Pilot case:
  - Tool 1.0.
  - Tool 2.0.
  - Tool 3.0

# TOOL ASSESSMENT

EVALUATION

SHORTCOMINGS

ADDED VALUE

# EFFECTIVENESS

'A big advantage of the tool is that you can work with people from **various backgrounds** and **bring understanding** of the process for them.'

'My point of view was **reflected very well**, of course. But for me the **combination of outcome from all stakeholders** is most interesting.'

# EXPERIENCE

'I would **absolutely recommend** using it in the decision making process. It could be **very beneficial**.'

'The tool **idea is very simple** and at the same time it surprisingly gives you **so much insight into the complexity** of the problem. That is what I really like.'

# ATTRACTIVENESS

*'You have ability to express of what you find important and the tool incorporates it to this wider pool, where your idea, your voice is being heard. In a normal discussion it would not be possible for everyone. **It is empowering.**'*

*'With your tool you let the decision maker **deep-dive in the problem**. For me this is not really making things easier. This might lead to **missing the objective of "supporting"**. On the other hand you provide **deeper understanding** and help to underpin the needs and 'the gut feel'*

# SHORTCOMINGS

TIME CONSUMING  
TO FILL IN

TOO SCIENTIFIC  
APPROACH

POOR VISUAL  
REPRESENTATION

# ADDED VALUE

INCREASED  
TRANSPARENCY

ENRICHED THINKING  
PROCESS

MATCHING COMPANY'S  
PRIORITIES

EMPOWERMENT  
AND ENGAGEMENT

PROVIDING STRUCTURE  
TO THE PROCESS

# DESIGNING AN EXPERT TOOL

THE SOLUTION

EVALUATION

CONCLUSION

KAROLINA  
KMIECIK

# THE RESEARCH QUESTION

How can *an expert tool* improve  
*(re)location decision making* in large  
multinational companies?

# HOW?

Increasing level of transparency among decision makers

Limiting the information inequalities and biases

Gathering and structuring the knowledge

Raising awareness of real demand coming from various parts of the company

Underpinning priorities

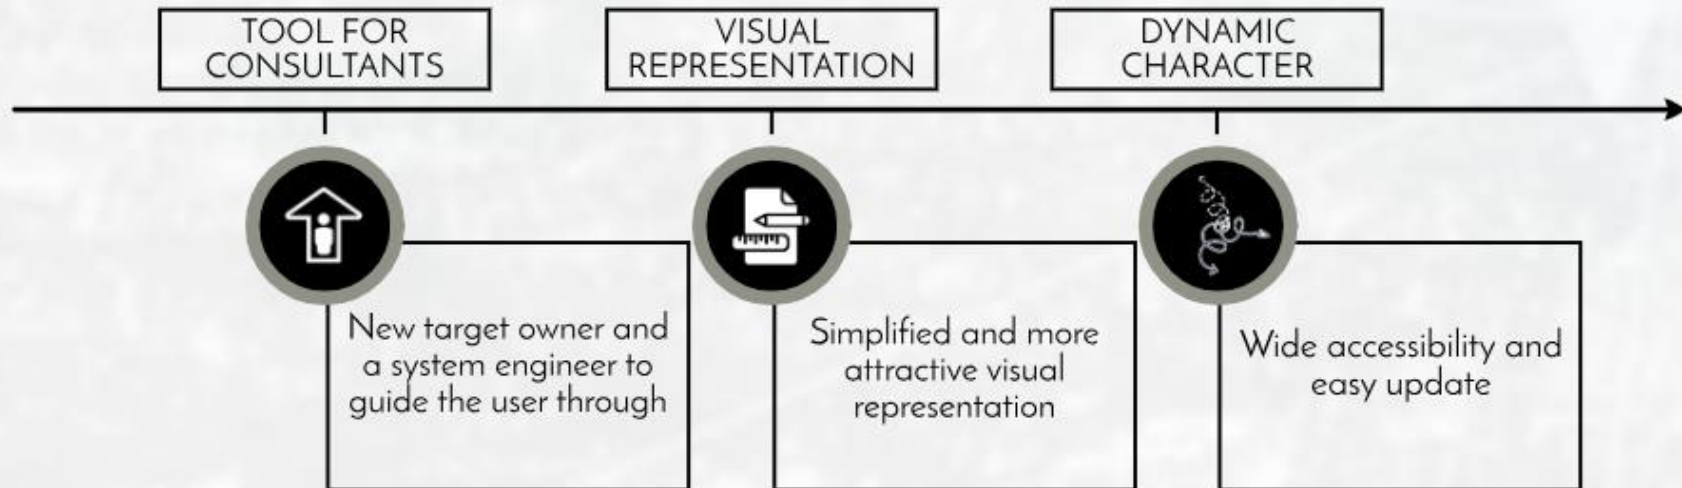

Understanding 'WHY'

Raising knowledge level and the acceptance of decision

Providing a feeling of empowerment to the stakeholders

# WHAT'S NEXT?

**THANK YOU**
